PROFESSIONAL SUMMARY

BSCS student and aspiring AI Engineer with hands-on experience in Python development, Generative AI, and AI automation. Skilled in building Retrieval-Augmented Generation (RAG) pipelines, LangChain-based LLM applications, and AI agents for real-world use cases. Experienced in designing n8n automation workflows, integrating REST APIs, and working with machine learning and computer vision projects. Seeking an internship or entry-level role to apply Python, AI engineering, and automation skills in a professional environment.

TECHNICAL SKILLS

Programming & Data: Python, NumPy, pandas, SQL, Jupyter Notebook, Google Colab

AI / Generative AI: Machine Learning fundamentals, Generative AI, LangChain, RAG (Retrieval-Augmented Generation), LLM Applications, AI Agents, Prompt Engineering, scikit-learn, PyTorch, Keras, OpenCV

Automation & APIs: n8n Workflow Automation, REST APIs, FastAPI, Flask, Google Sheets Automation

Tools & Platforms: Docker, Cloud & Deployment Fundamentals, Git, GitHub

Other: Data Analysis Fundamentals, API Integration, Workflow Automation, Problem Solving, Debugging & Troubleshooting

PROJECTS

Automated Lead Management & Scoring System

- Built an n8n-based lead automation workflow using form submission, Google Sheets, lead scoring, conditional logic, and Gmail notifications.
- Implemented lead scoring logic to classify leads as Hot (budget $\geq 100,000$), Warm (budget 50,000–99,999), or Cold (budget $< 50,000$).

Restaurant Automation & AI Agent

- Developed an n8n restaurant automation system using an AI Agent, chat trigger, Google Sheets as a data source, and memory to answer customer questions.
- Designed the AI Agent to support English, Urdu, and Roman Urdu, retrieving information from structured restaurant data instead of generating menu items or prices.

AI Product / Customer Support Chatbot

- Built an AI chatbot workflow using n8n, an AI Agent, Groq, memory, product search tools, and Google Sheets/product data.
- Integrated a production POST webhook to connect the chatbot workflow to external systems.

RAG & LangChain Learning

- Learned Retrieval-Augmented Generation (RAG) fundamentals, including document retrieval, embeddings, and vector databases connected to LLMs.
- Learned LangChain concepts for building LLM-powered applications, including chains, agents, tools, and retrieval workflows.

Machine Learning & Computer Vision Projects

- Built a Fake News Detection system using Python and machine learning.
- Trained a CNN-based model for Chest X-ray Pneumonia Classification.
- Implemented YOLOv8 for object detection.
- Implemented Mask R-CNN for pedestrian detection.

DCGAN Anime Face Generator

- Built a Deep Convolutional GAN (DCGAN) using PyTorch/Keras-style deep learning workflows on an Anime Faces dataset.
- Trained the model in Google Colab to generate synthetic anime face images.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

Superior University, Pakistan
